Application/Control Number: 10/643,160

Art Unit: 1723

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Internet Publication of record as submitted by applicant by Zyryanov et al entitled "Sensing and Fixation of NO2/N204 by Calix[4]Arenes".

Zyryanov et al disclose a calyx[4]arene compound that forms a complex with NO+ cations, wherein the NO+ may be any of various oxides of nitrogen and derived from a large variety of atmospheric substances, fossil fuels, power plants and large-scale industrial processes (Introduction of page 2997).

For claims 1-10, the reaction between the NO+ cation and arene is detectable by color change (2nd paragraph of page 2998).

For claim 2, the color change is detectable by spectroscopy.

For claim 3, page 2998, 1st paragraph teaches disassociation.

For claim 4, the detected color change may be to a colorless condition (page 2998, 2nd paragraph, bottom of 4th paragraph).

For claim 5, both cone and 1, 3 alternate configuration of arene molecule are taught in paragraphs bridging pages 2997 and 2998.

Application/Control Number: 10/643,160

Art Unit: 1723

For claim 6, page 2997, 1st paragraph teaches "fixation" or immobilization of the complex.

For claim 7, the introduction teaches the NO+ compounds in each of gaseous, liquid and liquid/gas mixture states of matter.

For claims 8 and 13 and also 16-18, the complex forms a molecular container, or storage device (page 2997, 2nd paragraph).

For claims 9 and 12 and also 18, use of substrates for cation transfer are introduced at page 3004, 1st paragraph.

For claim 10, stabilizing with Lewis Acids are taught at page 3000, 1st paragraph.

For claims 11 and 15, the forementioned fixation, necessarily concerns removal of the cations from air or liquid, hence purifying such air or liquid.

For claim 14, chemical stability persisting for weeks is taught at page 3000, top of the first column.

For claim 15, the introduction at page 2997 concerns simultaneous exposure of calixerenes to plural types of oxides of nitrogen in the air, hence to a mixture of oxides of nitrogen.

For claims 19 and 20, page 2003 teaches the calixerenes to be either optical sensors or enhance the potential for information storage and processing due to color changes/switches between two distinguishable states, hence use of calixerenes as optical switches.

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection. Applying of a new reference to

Art Unit: 1723

encompass teaching of NO+ compounds from other than nitric oxides was necessary in view of the Amendment.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Application/Control Number: 10/643,160

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Drodge at telephone number 571-272-1140. The examiner can normally be reached on Monday-Friday from 8:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker, can reached at 571-272-1151. The fax phone number for the examining group where this application is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either private PAIR or Public PAIR, and through Private PAIR only for unpublished applications. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have any questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
